This standard talks about the disclosure of significant accounting policies and fundamental accounting assumptions used in the preparation of financial statements.

Every entity should disclose all SIGNIFICANT accounting policies in notes on accounts of the financial statements.

1. What is an accounting policy?

A number of accounting policies are available for measurement of each item in financial statements.

The management of the entity should select suitable accounting policies considering the nature of business, legal requirements, Accounting Standards requirements, etc.

Let us see some examples where we find different policies. The below list is NOT exhaustive:

Purpose	Policies
Valuation of Inventory	FIFO, Weighted average cost, Standard cost, retail cost method, etc. (AS 2)
Valuation of Property, Plant and Equipment (PPE)	Cost model or Revaluation model (AS 10)

Global Problems, Smart Solutions Bjørn Lomborg, 2013-11-14 Every four years since 2004 the Copenhagen Consensus Center has organized and hosted a high profile thought experiment about how a hypothetical extra 75 billion of development assistance money might best be spent to solve twelve of the major crises facing the world today Collated in this specially commissioned book a group of more than 50 experts make their cases for investment discussing how to combat problems ranging from armed conflicts corruption and trade barriers to natural disasters hunger education and climate change For each case Alternative Perspectives are also included to provide a critique and make other suggestions for investment In addition a panel of senior economists including four Nobel Laureates rank the attractiveness of each policy proposal in terms of its anticipated cost benefit ratio This thought provoking book opens up debate encouraging readers to come up with their own rankings and decide which solutions are smarter than others

An Introduction to the Green Economy Adrian C. Newton, Elena Cantarello, 2014-08-13 The green economy is widely seen as a potential solution to current global economic and environmental crises and a potential mechanism by which sustainable development might be achieved in practice Considerable investments are now being made into the development of green technology renewable energy biodiversity conservation resource efficiency recycling of materials and green infrastructure This textbook provides a comprehensive introduction to the green economy using a strongly interdisciplinary approach based on environmental science rather than treating it as a sub set of economics The scientific principles of sustainability are presented which provide the foundations of the green economy with a particular focus on systems based approaches Examples of real world case studies are used to illustrate how the green economy can be achieved in practice In this way the authors provide a thorough overview of both the principles and practice of the green economy drawing from a wide range of disciplines including ecology geography social science psychology sustainability science environmental science law and economics The emphasis is on presenting results of the latest research derived from leading scientific journals Rather than focusing on a single definition of what constitutes a green economy the book introduces readers to the diversity of opinion that exists and engages them in what is an active on going debate This reflects the fact that many aspects of the green

economy and sustainable development more generally are currently contested In particular the book will help readers to strengthen their ability to critically evaluate the evidence for and against the views presented and to actively contribute to the future development of the green economy
