**Implementing High-Quality Primary Care** National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee on Implementing High-Quality Primary Care, 2021-06-30 High quality primary care is the foundation of the health care system It provides continuous person centered relationship based care that considers the needs and preferences of individuals families and communities Without access to high quality primary care minor health problems can spiral into chronic disease chronic disease management becomes difficult and uncoordinated visits to emergency departments increase preventive care lags and health care spending soars to unsustainable levels Unequal access to primary care remains a concern and the COVID 19 pandemic amplified pervasive economic mental health and social health disparities that ubiquitous high quality primary care might have reduced Primary care is the only health care component where an increased supply is associated with better population health and more equitable outcomes For this reason primary care is a common good which makes the strength and quality of the country s primary care services a public concern Implementing High Quality Primary Care Rebuilding the Foundation of Health Care puts forth an evidence based plan with actionable objectives and recommendations for implementing high quality primary care in the United States The implementation plan of this report balances national needs for scalable solutions while allowing for adaptations to meet local needs Orchestrating Value Pam Arlotto, Susan Irby, 2020-02-05 Orchestrating Value Population Health in the Digital Age focuses on the leadership thinking and mindset changes needed to transition from brick and mortar healthcare to digital health and connected care The fourth industrial revolution with convergent disruptions in biology business models computer science and culture has the potential to transform the healthcare system like never before Digital health startups Big Tech and progressive health systems will change the way health and healthcare are delivered to increasingly digitally savvy consumers This book challenges readers to rethink the role of data and technology in creating and designing the future Rather than hooking value based care and population health management onto traditional healthcare business models it focuses on the emergence of digital ecosystems Using the analogy of an orchestra the book introduces the importance of platforms in the formation of communities and markets with network effects to allow participants to collaborate create and innovate With quotes from healthcare industry leaders and change agents it helps the strategist understand the three stages of the transition from volume to value As conductor of the orchestra the CEO must navigate important leadership pivots to move beyond silo based thinking Finally the Care Management Platform is described as a new operating model for population health in the digital age As the next generation beyond foundational EHRs capabilities such as interoperability analytics care

management and patient consumer engagement will fundamentally change the way healthcare enterprises operate and deliver value to customers
