Healthcare Paveljit Bindra, 2018 Instructor Resources Test bank PowerPoint slides and case studies with discussion questions and teaching notes When you go shopping do you simply go to the store with the intention of buying as many items as you can Or do you select items based on the quality and satisfaction they will deliver for the money you spend For most people the quality of a product relative to its cost is most important The field of healthcare today is making a similar distinction placing a heightened emphasis on the delivery of value as opposed to sheer volume So what exactly does it mean to deliver value in healthcare For decades providers in the United States operated according to a model of volume based care under the general assumption that more care was better In recent years however important developments in policy and payment and innovations in disease management complex case management population health predictive analytics and decision support have contributed to a paradigm shift toward value based care Organizations are now striving to eliminate waste deliver higher quality care at a lower cost and increase patient satisfaction The Core Elements of Value in Healthcare provides a comprehensive introduction to value in healthcare as it relates to policy delivery finance economics strategy public health population health operations compliance managed care accountable care and preventive medicine The concepts of this book are reinforced through case examples and detailed discussion questions that encourage readers to apply the key principles as they learn Drawing from his experience as a physician a hospital executive and the founder of a medical group and health plan Dr Paveljit S Bindra examines value from a variety of perspectives Specific areas of focus include the following Clinical innovations Alignment structures Payment reform Quality improvement Information technology The Core Elements of Value in Healthcare equips readers with the knowledge to address disparate elements in the healthcare value chain and it demonstrates how effective coordination of these elements can enhance the quality of care reduce costs and improve patient satisfaction and outcomes

Best Care at Lower Cost Institute of Medicine, Committee on the Learning Health Care System in America, 2013-05-10

America's health care system has become too complex and costly to continue business as usual Best Care at Lower Cost explains that inefficiencies an overwhelming amount of data and other economic and quality barriers hinder progress in improving health and threaten the nation's economic stability and global competitiveness According to this report the knowledge and tools exist to put the health system on the right course to achieve continuous improvement and better quality care at a lower cost The costs of the system's current inefficiency underscore the urgent need for a systemwide

transformation About 30 percent of health spending in 2009 roughly 750 billion was wasted on unnecessary services excessive administrative costs fraud and other problems Moreover inefficiencies cause needless suffering By one estimate roughly 75 000 deaths might have been averted in 2005 if every state had delivered care at the quality level of the best performing state This report states that the way health care providers currently train practice and learn new information cannot keep pace with the flood of research discoveries and technological advances About 75 million Americans have more than one chronic condition requiring coordination among multiple specialists and therapies which can increase the potential for miscommunication misdiagnosis potentially conflicting interventions and dangerous drug interactions Best Care at Lower Cost emphasizes that a better use of data is a critical element of a continuously improving health system such as mobile technologies and electronic health records that offer significant potential to capture and share health data better In order for this to occur the National Coordinator for Health Information Technology IT developers and standard setting organizations should ensure that these systems are robust and interoperable Clinicians and care organizations should fully adopt these technologies and patients should be encouraged to use tools such as personal health information portals to actively engage in their care This book is a call to action that will guide health care providers administrators caregivers policy makers health professionals federal state and local government agencies private and public health organizations and educational institutions
