Accounting Education, Training, and Certification Alfred Borgonovo, Brian Friedrich, Michael Wells, 2019-06-06 This guide is designed to assist all those who are responsible for providing or overseeing formal education or practical experience that forms part of the initial professional development of aspiring professional accountants or the continuing professional development of professional accountants. It is particularly relevant to professional accountancy organizations. It is also intended for policy makers and regulators who determine which organizations are licensed to certify professional accountants and related specializations for example audit professionals. The purpose of the guide is to increase understanding of the gap between the current skills of many accountants in some regions and the skills that are relevant in increasingly digitized and globalized economies. The guide conveys the essential features of Competency Based Accounting Education Training and Certification (CBAETC). CBAETC provides a common reference framework for organizations pursuing CBAETC and the consultants working with them. It assists countries in developing in-country plans and implementing in-country processes that produce accountants with higher order skills relevant to their economy's rapidly evolving needs and improve financial reporting, auditing and regulation. This guide complements and builds on International Education Standards (IES) of the International Accounting Education Standards Board (IAESB).

Fusing Decision Support Systems Into the Fabric of the Context IOS Press, 2012-06-13 The field of Information Systems has been shifting from an immersion view which relies on the immersion of information technology (IT) as part of the business environment to a fusion view in which IT is fused within the business environment, forming a unified fabric that integrates work and personal life as well as personal and public information. In the context of this fusion view, decision support systems should achieve a total alignment with the context and the personal preferences of users. The advantage of such a view is an opportunity of seamless integration between enterprise environments and decision support system components. Thus, researchers and practitioners have to address the challenges of dealing with this shift in viewpoint and its consequences for decision making and decision support systems theories and applications. This book presents the latest innovations and advances in decision support systems with a special focus on the fusion view. These achievements will be of interest to all those involved and interested in decision making practice and research as well as more generally in the fusion view of modern information systems. The book covers a wide range of topical themes including a fusion view of business intelligence and data warehousing applications of multi-criteria decision analysis.
