Saltzman,2003-09-30 DNA delivery into cells is a rapidly developing area in gene therapy and biotechnology Moreover it is a powerful research tool to determine gene structure regulation and function Viral methods of DNA delivery are well characterized and efficient but little is known about the toxicity and immunogenicity of viral vectors As a result non viral transfection methods of DNA delivery are of increasing interest Synthetic DNA Delivery Systems is a comprehensive and current resource on DNA transfection The use of histidine rich peptides and polypeptides as DNA delivery systems and self assembled delivery systems based on cationic lipids and polymers are discussed Targeted delivery to organelles tumor cells and dendritic cells comprise an important topic

Physiology and Biotechnology Integration for Plant Breeding

Henry T. Nguyen,Abraham Blum,2004-01-14 Global demand for wheat rice corn and other essential grains is expected to steadily rise over the next twenty years Meeting this demand by increasing production through increased land use is not very likely and while better crop management may make a marginal difference most agriculture experts agree that this anticipated deficit must be made up through increased crop yields The first resource of its kind Physiology and Biotechnology Integration for Plant Breeding assembles current research in crop plant physiology plant biotechnology and plant breeding that is aimed toward improving crop plants genetically while supporting a productive agriculture ecosystem Highly comprehensive this reference provides access to the most innovative perspectives in crop physiology with a special emphasis on molecular approaches aimed at the formulation of those crop cultivars that offer the greatest potential to increase crop yields in stress environments Surveys the current state of the field as well as modern options and avenues for plant breeders and biotechnologists interested in augmenting crop yield and stability With the contributions of plant scientists from all corners of the globe who are actively involved in meeting this important challenge Physiology and Biotechnology Integration for Plant Breeding provides readers with the background information needed to understand this cutting edge work as well as detailed information on present and potential applications While the first half of the book establishes and fully explains the link between crop physiology and molecular biology the second part explores the application of biotechnology in the effective delivery of the high yield and environmentally stable crop plants needed to avert the very real possibility of worldwide hunger

Tungsten Erik Lassner,Wolf-Dieter Schubert,2012-12-06 Why does someone write a book about Tungsten There are several reasons and precedents for this the most important of which is that the last book on tungsten was written more than 20 years ago in 1977 by St W H Yih and Ch T Wang During the intervening period there have been many new scientific and technological developments and innovations so it was not only our opinion but the view of many other members of the tungsten family that it was time to start writing a new book about tungsten Preparations of the new book began in 1994 further impetus to the project was provided by the realization that in spite of this new knowledge having been presented at seminars or published in the technical press a general acknowledgement of it by the majority of technicians and scientists is still far from being realized It is our hope that this book will significantly contribute to a broader acceptance of recent

scientific and technological innovations An important prerequisite for such a project is the availability of a recently retired experienced person willing to devote his time and talents to the tedious part of the exercise
