**Completing the Forecast** National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Estimating and Communicating Uncertainty in Weather and Climate Forecasts, 2006-11-09  
Uncertainty is a fundamental characteristic of weather seasonal climate and hydrological prediction and no forecast is complete without a description of its uncertainty Effective communication of uncertainty helps people better understand the likelihood of a particular event and improves their ability to make decisions based on the forecast Nonetheless for decades users of these forecasts have been conditioned to receive incomplete information about uncertainty They have become used to single valued deterministic forecasts e g the high temperature will be 70 degrees Fahrenheit 9 days from now and applied their own experience in determining how much confidence to place in the forecast Most forecast products from the public and private sectors including those from the National Oceanographic and Atmospheric Administration s National Weather Service continue this deterministic legacy Fortunately the National Weather Service and others in the prediction community have recognized the need to view uncertainty as a fundamental part of forecasts By partnering with other segments of the community to understand user needs generate relevant and rich informational products and utilize effective communication vehicles the National Weather Service can take a leading role in the transition to widespread effective incorporation of uncertainty information into predictions **Completing the Forecast** makes recommendations to the National Weather Service and the broader prediction community on how to make this transition

Survival of a Perverse Nation Tamar R. Shirinian, 2024-10-11 In Survival of a Perverse Nation Tamar R. Shirinian traces two widespread rhetorics of perversion sexual and moral in postsocialist Armenia showing how they are tied to anxieties about the nation's survival In her fieldwork with Armenians Shirinian found that right wing nationalists focus on sexual perversion centers the figure of the homosexual while questions of moral perversion surround oligarchs and other members of the political economic elite While the homosexual is seen as non or improperly reproductive the oligarch's moral deviations from the caring and paternalistic expectations associated with national leadership also endanger Armenia's survival Shirinian shows how both figures threaten the nation's proper social reproduction a source of great anxiety for a nation whose primary point of identity is surviving genocide In the existential threat posed by these forms of perversion Shirinian finds paths where nonsurvival might mean the creation of futures that are queerer and more just Detailing how the language of perversion offers trenchant critiques of capitalism as a perversion of life Shirinian presents a new queer theory of political economy

COVID-19 Pandemic – Philosophical Approaches Nicolae Sfetcu, The paper begins with a retrospective of the debates on the origin of life the virus or the cell The virus needs a cell for replication instead the cell is a more evolved form on the evolutionary scale of life In addition the study of viruses raises pressing conceptual and philosophical questions about their nature their classification and their place in the biological world The subject of pandemics is approached starting from the existentialism of Albert Camus and Sartre the replacement of the exclusion ritual with the disciplinary mechanism of Michel Foucault and about the Gaia hypothesis developed by James Lovelock and supported in the current pandemic by Bruno Latour The social dimensions of pandemics their connection to global warming which has led to an increase in infectious diseases and the deforestation of large areas which have caused viruses to migrate from their native area their reservoir are highlighted below The ethics of pandemics is approached from several philosophical points of view of which the most important in a crisis of such global dimensions is utilitarianism which involves maximizing benefits for society in direct conflict with the usual Kantian view of respect for people as individuals After a retrospective of the COVID 19 virus that caused the current pandemic its life cycle and its history with an emphasis on the philosophy of death the concept of biopower initially developed by Foucault is discussed with reference to the practice of modern states of control of the populations and the debate generated by Giorgio Agamben who states that what is manifested in this pandemic is the growing tendency to use the state of emergency as a normal paradigm of government An interesting and much debated approach is the one generated by the works of Slavoj Žižek who states that the current pandemic has led to the bankruptcy of

the current barbaric capitalism wondering if the path that humanity will take is a neo communism Another important negative effect is desocialization with the conclusion of some philosophers that we cannot exist independently of our relationships with others that a person s humanity depends on the humanity of those around him The last section is dedicated to forecasting what the world will look like after the pandemic and there are already signs of a paradigm shift including the sudden disappearance of the wall ideology a cough was enough to make it suddenly impossible to avoid the responsibility that every individual has it towards all living beings for the simple fact that he is part of this world and of the desire to be part of it The whole is always involved in part because everything is in a sense in everything and in nature there are no autonomous regions that are an exception The COVID 19 pandemic seems to restore the supremacy that once belonged to politics One of the virtues of the virus is its ability to generate a more sober idea of freedom to be free means to do what needs to be done in a specific situation
