*Weather on the Air* Robert Henson, 2013-01-05 From low humor to high drama TV weather reporting has encompassed an enormous range of styles and approaches triggering chuckles infuriating the masses and at times even saving lives In Weather on the Air meteorologist and science journalist Robert Henson covers it all the people technology science and show business that combine to deliver the weather to the public each day Featuring the long term drive to professionalize weathercasting the complex relations between government and private forecasters and the effects of climate change science and the Internet on today s broadcasts With dozens of photos and anecdotes illuminating the many forces that have shaped weather broadcasts over the years this engaging study will be an invaluable tool for students of broadcast meteorology and mass communication

and an entertaining read for anyone fascinated by the public face of weather

**Completing the Forecast** National Research Council, Division on Earth and Life Studies, Board on Atmospheric Sciences and Climate, Committee on Estimating and Communicating Uncertainty in Weather and Climate Forecasts, 2006-11-09 Uncertainty is a fundamental characteristic of weather seasonal climate and hydrological prediction and no forecast is complete without a description of its uncertainty Effective communication of uncertainty helps people better understand the likelihood of a particular event and improves their ability to make decisions based on the forecast Nonetheless for decades users of these forecasts have been conditioned to receive incomplete information about uncertainty They have become used to single valued deterministic forecasts e.g. the high temperature will be 70 degrees Fahrenheit 9 days from now and applied their own experience in determining how much confidence to place in the forecast Most forecast products from the public and private sectors including those from the National Oceanographic and Atmospheric Administration's National Weather Service continue this deterministic legacy Fortunately the National Weather Service and others in the prediction community have recognized the need to view uncertainty as a fundamental part of forecasts By partnering with other segments of the community to understand user needs generate relevant and rich informational products and utilize effective communication vehicles the National Weather Service can take a leading role in the transition to widespread effective incorporation of uncertainty information into predictions

**Completing the Forecast** makes recommendations to the National Weather Service and the broader prediction community on how to make this transition

*Weather Services for the Nation* Committee on the Assessment of the National Weather Service's Modernization Program, Board on Atmospheric Sciences and Climate, Division on Earth and Life Studies, National Research Council, 2012-11-16 During the 1980s and 1990s the National Weather Service NWS undertook a major program called the Modernization and Associated Restructuring MAR The MAR was officially completed in 2000 No comprehensive assessment of the execution of the MAR plan or comparison of the promised benefits of the MAR to its actual impact had ever been conducted Therefore Congress asked the National

Academy of Sciences to conduct an end to end assessment That report The National Weather Service Modernization and Associated Restructuring A Retrospective Assessment concluded that the MAR was a success Now twelve years after the official completion of the MAR the challenges faced by the NWS are no less important than those of the pre MAR era The three key challenges are 1 Keeping Pace with accelerating scientific and technological advancement 2 Meeting Expanding and Evolving User Needs in an increasingly information centric society and 3 Partnering with an Increasingly Capable Enterprise that has grown considerably since the time of the MAR Weather Services for the Nation presents three main recommendations for responding to these challenges These recommendations will help the NWS address these challenges making it more agile and effective This will put it on a path to becoming second to none at integrating advances in science and technology into its operations and at meeting user needs leading in some areas and keeping pace in others It will have the highest quality core capabilities among national weather services It will have a more agile organizational structure and workforce that allow it to directly or indirectly reach more end users save more lives and help more businesses And it will have leveraged these capabilities through the broader enterprise This approach will make possible societal benefits beyond what the NWS budget alone allows [AV Market Place](#) Information Today Inc,2010 *Congressional Record* United States. Congress,2013 **RTNDA Communicator** ,2006 **Natural Disasters and Risk Management in Canada** Nirupama Agrawal,2018-03-27 These chapters provide valuable and comprehensive information on a variety of hazards including both scientific and social aspects of disasters The work introduces the concept of large medium and small scale hazards and includes many useful case studies as well as working examples of theoretical concepts As readers will acknowledge today the distinction between natural and technological hazards is becoming blurred and a new concept of NATECH hazards is evolving For permanent hazards such as tides wind waves coastal erosion and climate change routine predictions are made whereas for evanescent hazards including droughts sea level rise and coastal subsidence monitoring of various parameters is the norm Only for episodic hazards for example hurricanes winter storms tsunamis and river floods early warning systems are used with varying degrees of success The book explores how for certain episodic hazards like tornadoes landslides forest fires snow avalanches and volcanic eruptions the early warning systems are still in various stages of development Readers will gain knowledge of theoretical and practical concepts of risk evaluation which assist in better understanding of disaster dynamics and readers will become better equipped in quantification of disaster risk and vulnerability The author explains how risk reduction initiatives taking into account stakeholders participation and perception can provide a roadmap to building resilient communities and cities This book will be useful not only to practitioners of disaster management but also to research scholars and graduate students It is highly readable and will appeal more broadly too to all those who are interested in the very latest thinking on and expert analysis of hazards and disasters **Integrating Social and Behavioral Sciences Within the Weather Enterprise** National Academies of Sciences, Engineering, and

Medicine, Division of Behavioral and Social Sciences and Education, Division on Earth and Life Studies, Board on Human-Systems Integration, Board on Environmental Change and Society, Board on Atmospheric Sciences and Climate, Committee on Advancing Social and Behavioral Science Research and Application Within the Weather Enterprise, 2018-01-05 Our ability to observe and forecast severe weather events has improved markedly over the past few decades. Forecasts of snow and ice storms, hurricanes and storm surge, extreme heat and other severe weather events are made with greater accuracy, geographic specificity and lead time to allow people and communities to take appropriate protective measures. Yet hazardous weather continues to cause loss of life and result in other preventable social costs. There is growing recognition that a host of social and behavioral factors affect how we prepare for, observe, predict, respond to and are impacted by weather hazards. For example, an individual's response to a severe weather event may depend on their understanding of the forecast, prior experience with severe weather, concerns about their other family members or property, their capacity to take the recommended protective actions and numerous other factors. Indeed, it is these factors that can determine whether or not a potential hazard becomes an actual disaster. Thus, it is essential to bring to bear expertise in the social and behavioral sciences (SBS) including disciplines such as anthropology, communication, demography, economics, geography, political science, psychology and sociology to understand how people's knowledge, experiences, perceptions and attitudes shape their responses to weather risks and to understand how human cognitive and social dynamics affect the forecast process itself. Integrating Social and Behavioral Sciences Within the Weather Enterprise explores and provides guidance on the challenges of integrating social and behavioral sciences within the weather enterprise. It assesses current SBS activities, describes the potential value of improved integration of SBS and barriers that impede this integration, develops a research agenda and identifies infrastructural and institutional arrangements for successfully pursuing SBS weather research and the transfer of relevant findings to operational settings. [Flying Magazine](#), 1996-09 [Climatenomics](#) Bob Keefe, 2022-05-17 The battle against climate change is no longer just an environmental or social issue. As shareholders demand corporations protect assets against climate change and the economic impact of environmental disasters suck billions of dollars out of the economy, capitalism itself has become an ally. The economic impact of climate change is rattling the foundation of our economy at its very core. It's blowing up centuries-old industries from automobiles to oil and gas, creating new opportunities for investors and entrepreneurs. It's costing Americans billions of dollars each and every year. And most importantly, it's forcing politicians to pass long-overdue policies that will transform our businesses, our lives and our future like never before. The good news about this economic earthquake is that it just might be the thing that saves our planet. This is the first book to lay out how climate change has become an economic issue above all and how that has changed everything from the business to politics to the outlook for the future. Bob Keefe, executive director of E2, a national nonpartisan organization dedicated to providing business perspectives on environmental issues, shows readers how this new reality will

impact their industries businesses jobs and communities and transform our country s economy *Climatenomics* will be essential reading for anyone who cares about business politics or the future of our planet Popular Science ,1997-08 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better
