how climate change population increase and the growing food demand will have major impact on water availability in many countries in the world Part Three describes water for energy and how energy production and conversion depend on water availability As a consequence all planning has to take both water and energy into consideration The environmental including water consequences of oil and coal exploration and refining are huge in North America as well as in the rest of the world Furthermore oil leak accidents have hit America Africa Europe as well as Asia The consequences of hydropower are discussed and the competition between hydropower generation flood control and water storage is illustrated The importance of water for cooling thermal power plants is described as this was so tragically demonstrated at the Fukushima nuclear plants in 2011 Climate change will further emphasize the strong coupling between water availability and the operation of power plants Part Four analyses energy for water how water production and treatment depend on energy The book shows that a lot can be done to improve equipment develop processes and apply advanced monitoring and control to save energy for water operations Significant amounts of energy can be saved by better pumping the reduction of leakages controlled aeration in biological wastewater treatment more efficient biogas production and by improved desalination processes The water energy issue is not only about technology It is our attitudes and our lifestyle that can significantly influence the consumption of both water and energy We all have to be reminded that water is energy and energy is water The book is aimed at various kinds of readers The politician and decision maker providing a holistic view The engineer who wishes to find out about the key issues and to understand the strong driving forces from the increasing population climate change and the food supply in the world The student who wishes to get an overview of future challenges and new possibilities The planner water and energy have to be planned together The designer of a water and wastewater system how does energy come in The operator of a water or a wastewater treatment plant what are the possibilities to make the system more efficient The wastewater treatment manager what are the possibilities to save and recover energy in a wastewater treatment plant The researcher looking for connections between different specialities What kind of cross disciplinary research would be needed The power and energy professional mostly the water issue is forgotten until there is water scarcity The water professional it is not only a matter of operating water systems efficiently Water professionals have to be much more engaged in the water quantity and water quality implications of energy generation It is too late to attack the problems by developing methods for the treatment of contaminated water The water consumption and the water pollution simply have to be closely watched already at the energy production phase About the author Gustaf Olsson Professor Em in Industrial Automation Lund University Sweden Since 2006 Gustaf is professor emeritus at Lund University Sweden Gustaf has devoted his research to control and automation in water systems electrical power systems and process industries From 2006 to 2008 he was part time professor in electrical power systems at Chalmers University of Technology Sweden Since 2006 he has been guest professor at the Technical University of Malaysia UTM and at the Tsinghua University in Beijing China about one month per year at each
