**Letters Written in White** Kathryn Perez, 2015-11-24 I'm dead I'm cold and alone and I'm dead There's no air in my lungs My chest is as cold and hollow as a cave on a snow capped mountainside My heart no longer beats there Frigid winds whistle through my ribs and the sadness inside me weeps like my favorite tree Days ago I met with death face to face The mirror our meeting place My two darkened green eyes stared deeply into hers I tilted my head to the side She did too It's time I whispered It's time she whispered And with that I turned away from her the woman in the mirror who knew all of my secrets and all of my pain I walked away from her and yet we'd never been closer than we were at that moment The inner struggle was over No more arguing with the woman in the mirror No more arguing with

torn apart for good      *Autonomous Search* Youssef Hamadi, Eric Monfroy, Frédéric Saubion, 2012-01-05 Decades of innovations in combinatorial problem solving have produced better and more complex algorithms. These new methods are better since they can solve larger problems and address new application domains. They are also more complex, which means that they are hard to reproduce and often harder to fine tune to the peculiarities of a given problem. This last point has created a paradox where efficient tools are out of reach of practitioners. Autonomous search (AS) represents a new research field defined to precisely address the above challenge. Its major strength and originality consist in the fact that problem solvers can now perform self improvement operations based on analysis of the performances of the solving process, including short term reactive reconfiguration and long term improvement through self analysis of the performance, offline tuning and online control and adaptive control and supervised control. Autonomous search crosses the chasm and provides engineers and practitioners with systems that are able to autonomously self tune their performance while effectively solving problems. This is the first book dedicated to this topic and it can be used as a reference for researchers, engineers and postgraduates in the areas of constraint programming, machine learning, evolutionary computing and feedback control theory. After the editors' introduction to autonomous search, the chapters are focused on tuning algorithm parameters, autonomous complete tree based constraint solvers, autonomous control in metaheuristics and heuristics, and future autonomous solving paradigms.
