**Enzymes in Nonaqueous Solvents** Evgeny N. Vul'fon, 2010-11-19 Enzymatic

catalysis has gained considerable attention in recent years as an efficient tool in the preparation of natural products pharmaceuticals fine chemicals and food ingredients The high selectivity and mild reaction conditions associated with enzymatic transformations have made this approach an attractive alternative in the synthesis of complex bioactive compounds which are often difficult to obtain by standard chemical routes However the majority of organic compounds are not very soluble in water which was traditionally perceived as the only suitable reaction medium for the application of biocatalysts The realization that most enzymes can function perfectly well under nearly anhydrous conditions and in addition display a number of useful properties e.g. highly enhanced stability and different selectivity has dramatically widened the scope of their application to the organic synthesis Another great attraction of using organic solvents rather than water as a reaction solvent is the ability to perform synthetic transformations with relatively inexpensive hydrolytic enzymes It is worth reminding the reader that in vivo the synthetic and hydrolytic pathways are catalyzed by different enzymes However elimination of water from the reaction mixture enables the reversal of hydrolytic enzymes and thus avoids the use of the expensive cofactors or activated substrates that are required for their synthetic counterparts

Pomeranz, 2013-12-01 The first edition of Food Analysis Theory and Practice was published in 1971 and was revised in 1978 The second edition was published in 1987 and in 1993 we found it necessary to prepare a third edition to reflect and cover the most recent advances in the field of food analysis A complete revision of a book is an arduous and anguished task The following are challenges that we wanted to address in this revision to update the material without eliminating classic and time preserved and honored methods used by the food analyst to broaden and deepen the coverage and scope without increasing the size of the book and to produce a textbook for senior undergraduate and graduate students with regard to objectives scope and outlay while providing a reference and resource for the worker and researcher in the field of food analysis To meet those challenges we added much new material and took out practically the same amount of relatively outdated material Every chapter has been extensively updated and revised many of the pictures in the previous editions were deleted and whenever available and appropriate were replaced by diagrams or flow sheets In Part I we have expanded the sections on sampling preparation of samples reporting results and reliability of analyses Rotating Disc Biological Treatment of Acid Mine Drainage Harvey Olem, Richard F.
