and liability as trace evidence in criminal investigations and when searching for and evaluating buried human remains This book shows soil forensics as practiced in this legal context emerging and solidifying in many countries all over the world differing in some respects because of differences in legal systems but ultimately sharing common grounds

Enzymes in Nonaqueous Solvents Evgeny N. Vulfson, 2010-11-19 Enzymatic catalysis has gained considerable attention in recent years as an efficient tool in the preparation of natural products pharmaceuticals fine chemicals and food ingredients The high selectivity and mild reaction conditions associated with enzymatic transformations have made this approach an attractive alternative in the synthesis of complex bioactive compounds which are often difficult to obtain by standard chemical routes However the majority of organic compounds are not very soluble in water which was traditionally perceived as the only suitable reaction medium for the application of biocatalysts The realization that most enzymes can function perfectly well under nearly anhydrous conditions and in addition display a number of useful properties e.g highly enhanced stability and different selectivity has dramatically widened the scope of their application to the organic synthesis Another great attraction of using organic solvents rather than water as a reaction solvent is the ability to perform synthetic transformations with relatively inexpensive hydrolytic enzymes It is worth reminding the reader that in vivo the synthetic and hydrolytic pathways are catalyzed by different enzymes However elimination of water from the reaction mixture enables the reversal of hydrolytic enzymes and thus avoids the use of the expensive cofactors or activated substrates that are required for their synthetic counterparts

Phytoplankton and Equilibrium Concept: The Ecology of Steady-State Assemblages Luigi Naselli-Flores, Judit Padisák, Martin F. Bach, 2003-12-31 This volume summarises the outcome of the 13th Workshop of the International Association of Phytoplankton Taxonomy and Ecology IAP on if and if so under what conditions phytoplankton assemblages reach equilibrium in natural environments Quite a number of ecological concepts use terms such as ecological equilibrium stability steady state climax stable state etc However these ecological concepts often have been translations of scientific theories developed in physics or chemistry but they almost always lack scientific corroboration the problem being that often these concepts remain vague and they are not formally defined Here an attempt to formally

recognize what equilibrium is in phytoplankton ecology is traced The book also contains papers by leading scientists on the taxonomy of two selected key groups cryptomonads and filamentous cyanoprokaryotes This volume is addressed to all those involved in phytoplankton taxonomy and ecology and in ecology itself

Plant Cell Walls Peter Albersheim, Alan Darvill, Keith Roberts, Ron Sederoff, Andrew Staehelin, 2010-04-15 Plant cell walls are complex dynamic cellular structures essential for plant growth development physiology and adaptation *Plant Cell Walls* provides an in depth and diverse view of the microanatomy biosynthesis and molecular physiology of these cellular structures both in the life of the plant and in their use for bioproducts and biofuels *Plant Cell Walls* is a textbook for upper level undergraduates and graduate students as well as a professional level reference book Over 400 drawings micrographs and photographs provide visual insight into the latest research as well as the uses of plant cell walls in everyday life and their applications in biotechnology Illustrated panels concisely review research methods and tools a list of key terms is given at the end of each chapter and extensive references organized by concept headings provide readers with guidance for entry into plant cell wall literature Cell wall material is of considerable importance to the biofuel food timber and pulp and paper industries as well as being a major focus of research in plant growth and sustainability that are of central interest in present day agriculture and biotechnology The production and use of plants for biofuel and bioproducts in a time of need for responsible global carbon use requires a deep understanding of the fundamental biology of plants and their cell walls Such an understanding will lead to improved plant processes and materials and help provide a sustainable resource for meeting the future bioenergy and bioproduct needs of humankind
