Massaro,2017-05-16 Resource added for the Criminal Justice Law Enforcement 105046 and Professional Studies 105045 programs A Shot At History Rohit Brijnath,2011-10-11 Abhinav Bindra once shot 100 out of 100 in practice six times in a row and walked out of the range unhappy He is a perfectionist who once soled his shoes with rubber from Ferrari tyres because he thought it would help He would wake up at 3 am to practise at his range at home if an idea suddenly struck him It is from such obsession that greatness arrives Abhinav Bindra s journey to become the first Indian to win an individual Olympic gold and the first Indian to win a World Championship gold is a story of single minded passion The Olympics has been an all consuming journey for

him ever since he was shattering beer bottles and glass ampoules in his garden in Chandigarh No obstacle was too hard to overcome no amount of practice too much no experiment too futile and no defeat so severe that it made a comeback impossible Shattered by his failure at the 2004 Athens Olympics when a gold medal seemed imminent he changed as a shooter from a boy who loved shooting he became an athlete bent on redemption a scientist who would try anything from mapping his own brain to drinking yak milk to climbing rock walls to win at the Beijing Olympics in 2008 His victory was not just a personal triumph it was a gift to his nation a breaking down of a sporting barrier that had stood for a century Bindra's feat has taught his peers and those yet to come that an Olympic gold isn't an impossible dream In ranges on fields in arenas Indian athletes now own a new belief they wear the knowledge that no challenge is beyond them Helping to tell this remarkable story is sportswriter Rohit Brijnath who collaborated with Bindra in producing this compelling autobiography of one of India's greatest sportsmen *Hatcher's Notebook* Julian S. Ehrhart, 2015-11-06 Operations in Afghanistan frequently require United States ground forces to engage and destroy the enemy at ranges beyond 300 meters These operations occur in rugged terrain and in situations where traditional supporting fires are limited due to range or risk of collateral damage With these limitations the infantry in Afghanistan require a precise lethal fire capability that exists only in a properly trained and equipped infantryman While the infantryman is ideally suited for combat in Afghanistan his current weapons doctrine and marksmanship training do not provide a precise lethal fire capability to 500 meters and are therefore inappropriate Comments from returning non commissioned officers and officers reveal that about fifty percent of engagements occur past 300 meters The enemy tactics are to engage United States forces from high ground with medium and heavy weapons often including mortars knowing that we are restricted by our equipment limitations and the inability of our overburdened soldiers to maneuver at elevations exceeding 6000 feet Current equipment training and doctrine are optimized for engagements under 300 meters and on level terrain There are several ways to extend the lethality of the infantry A more effective 5.56 mm

bullet can be designed which provides enhanced terminal performance out to 500 meters A better option to increase incapacitation is to adopt a larger caliber cartridge which will function using components of the M16 M4 The 2006 study by the Joint Service Wound Ballistics Integrated Product Team discovered that the ideal caliber seems to be between 6.5 and 7 mm This was also the general conclusion of all military ballistics studies since the end of World War I *American Military History Volume 1* Army Center of Military History,2016-06-05 American Military History provides the United States Army in particular its young officers NCOs and cadets with a comprehensive but brief account of its past The Center of Military History first published this work in 1956 as a textbook for senior ROTC courses Since then it has gone through a number of updates and revisions but the primary intent has remained the same Support for military history education has always been a principal mission of the Center and this new edition of an invaluable history furthers that purpose The history of an active organization tends to expand rapidly as the organization grows larger and more complex The period since the Vietnam War at which point the most recent edition ended has been a significant one for the Army a busy period of expanding roles and missions and of fundamental organizational changes In particular the explosion of missions and deployments since 11 September 2001 has necessitated the creation of additional open ended chapters in the story of the U S Army in action This first volume covers the Army s history from its birth in 1775 to the eve of World War I By 1917 the United States was already a world power The Army had sent large expeditionary forces beyond the American hemisphere and at the beginning of the new century Secretary of War Elihu Root had proposed changes and reforms that within a generation would shape the Army of the future But world war global war was still to come The second volume of this new edition will take up that story and extend it into the twenty first century and the early years of the war on terrorism and includes an analysis of the wars in Afghanistan and Iraq up to January 2009 Rifle Marksmanship U. Modern Exterior Ballistics Robert L. McCoy,2012 Modern Exterior Ballistics is a comprehensive text covering the basic free flight dynamics of symmetric projectiles The book provides a historical perspective of early developments in the 19th century the technology leading to World War I and that through World War II into the modern post war era Historical topics include the first ballistic firing tables early wind tunnel experiments the development of free flight spark ranges and the first supercomputer ENIAC which was designed to compute artillery trajectories for the U S Army Ballistic Research Laboratory The level of the text requires an undergraduate education in mathematics physics and mechanical or aerospace engineering The basic principles of ballistic science are developed from a comprehensive definition of the aerodynamic forces that control the flight dynamics of symmetric projectiles The author carefully starts with the basic vacuum point mass trajectory adds the effects of drag discusses the action of winds simple flat fire approximations Coriolis effects and concludes with the classic modified point mass trajectories Included in the discussion are analytical methods change of variables from time to distance numerical solutions and a chapter on the Siacci Method The Siacci Method provides a historical perspective for computing flat fire

trajectories by simple quadrature and is used in the sporting arms industry. The final six chapters of the book present an extensive physical and mathematical analysis of the motion of symmetric projectiles. The linearized equations of angular and swerving motion are derived in detail. The effects of mass asymmetry in bore yaw, cross wind, and launch in a slipstream are discussed. Special consideration is given to the derivation and explanation of aerodynamic jump. These subjects are then expanded to include a complete chapter on nonlinear aerodynamic forces and moments. The final chapter in the book presents an overview of experimental methods for measuring the flight dynamics of projectiles. The great forte of *Modern Exterior Ballistics* is the author's effort to provide many fine specific examples of projectile motion illustrating key flight behaviors. The extensive collection of data on projectiles from small arms to artillery used to substantiate calculations and examples is alone a valuable reference. The ultimate joy of the book is the incomparable comprehensive set of flow field shadow graphs illustrating the entire spectrum of projectile flight from subsonic through transonic and supersonic. The volume is a necessary addition to any undergraduate or graduate course in flight dynamics.
