Accurate Computation Of Mathieu Functions Synthesis Lectures On Computational Electromagnetics:

Accurate Computation of Mathieu Functions Andrew Peterson, Malcolm Bibby, 2013-09-01 This lecture presents a modern approach for the computation of Mathieu functions These functions find application in boundary value analysis such as electromagnetic scattering from elliptic cylinders and flat strips as well as the analogous acoustic and optical problems and many other applications in science and engineering The authors review the traditional approach used for these functions show its limitations and provide an alternative tuned approach enabling improved accuracy and convergence The performance of this approach is investigated for a wide range of parameters and machine precision Examples from electromagnetic scattering are provided for illustration and to show the convergence of the typical series that employ Mathieu functions for boundary value analysis

Electromagnetics and Network Theory and their Microwave Technology

Applications Stefan Lindenmeier, Robert Weigel, 2011-07-13 This volume provides a discussion of the challenges and perspectives of electromagnetics and network theory and their microwave applications in all aspects. It collects the most interesting contribution of the symposium dedicated to Professor Peter Russer held in October 2009 in Munich.

Fractional Signals and Systems Manuel Duarte Ortigueira, Duarte Valério, 2020-03-09 The book illustrates the theoretical results of fractional derivatives via applications in signals and systems covering continuous and discrete derivatives and the corresponding linear systems. Both time and frequency analysis are presented. Some advanced topics are included like derivatives of stochastic processes. It is an essential reference for researchers in mathematics, physics, and engineering.

Multiscale and Multiresolution Methods Timothy J. Barth, Tony Chan, Robert Haimes, 2001-11-20 Many computationally challenging problems omnipresent in science and engineering exhibit multiscale phenomena so that the task of computing or even representing all scales of action is computationally very expensive unless the multiscale nature of these problems is exploited in a fundamental way. Some diverse examples of practical interest include the computation of fluid turbulence, structural analysis of composite materials, terabyte data mining, image processing, and a multitude of others. This book consists of both invited and contributed articles which address many facets of efficient multiscale representation and scientific computation from varied viewpoints such as hierarchical data representations, multilevel algorithms, algebraic homogenization, and others. This book should be of particular interest to readers interested in recent and emerging trends in multiscale and multiresolution computation with application to a wide range of practical problems.

Complex Computing-Networks Izzet Cem Gökner, Levent Sevgi, 2010-11-23 This book contains the ceremonials and the proceedings pertaining to the International Symposium CCN2005 on Complex Computing Networks: A Link between Brain-like and Wave Oriented Electrodynamics Algorithms convened at Düzü University of Istanbul, Turkey, on 13-14 June 2005 in connection with the bestowal of the honorary doctorate degrees on Professors Leopold B. Felsen and Leon O. Chua for their extraordinary achievements in electromagnetics and nonlinear systems respectively. The symposium was co-organized by Cem Gökner and Levent Sevgi in consultation with Leopold B. Felsen and Leon O. Chua. Istanbul is a city with wonderful natural and historical surroundings, a city not only interconnecting Asia and Europe but also Eastern and Western cultures. Therefore CCN2005 was a memorable event not only in the lifetime of Drs. Felsen, Chua, and their families but also for all the other participants who were there to congratulate the recipients and participate in the symposium.

Geometric Level Set Methods in Imaging, Vision, and Graphics Stanley Osher, Nikos Paragios, 2007-05-08 Here is for the first time a book that clearly explains and applies new level set methods to problems and applications in computer vision, graphics, and imaging. It is an essential compilation of survey chapters from the leading researchers in the field. The applications of the methods are emphasized.

Proceedings of the European Computing Conference Nikos Mastrokakis, Valeri Mladenov, Vassiliki T. Kontargyri, 2010-03-16 The European Computing Conference offers a unique forum for establishing new collaborations within

present or upcoming research projects exchanging useful ideas presenting recent research results participating in discussions and establishing new academic collaborations linking university with the industry Engineers and Scientists working on various areas of Systems Theory Applied Mathematics Simulation Numerical and Computational Methods and Parallel Computing present the latest findings advances and current trends on a wide range of topics This proceedings volume will be of interest to students researchers and practicing engineers *Induction Accelerators* Ken

Takayama, Richard J. Briggs, 2010-10-05 A broad class of accelerators rests on the induction principle whereby the accelerating electrical fields are generated by time varying magnetic fluxes Particularly suitable for the transport of bright and high intensity beams of electrons protons or heavy ions in any geometry linear or circular the research and development of induction accelerators is a thriving subfield of accelerator physics This text is the first comprehensive account of both the fundamentals and the state of the art about the modern conceptual design and implementation of such devices Accordingly the first part of the book is devoted to the essential features of and key technologies used for induction accelerators at a level suitable for postgraduate students and newcomers to the field Subsequent chapters deal with more specialized and advanced topics *A Century of Excellence in Measurements, Standards, and Technology* David R. Lide, 2001-10-30 Established by Congress in 1901 the National Bureau of Standards NBS now the National Institute of Standards and Technology NIST has a long and distinguished history as the custodian and disseminator of the United States standards of physical measurement Having reached its centennial anniversary the NBS NIST reflects on and celebrates its first century with this book describing some of its seminal contributions to science and technology Within these pages are 102 vignettes that describe some of the Institute's classic publications Each vignette relates the context in which the publication appeared its impact on science technology and the general public and brief details about the lives and work of the authors The groundbreaking works depicted include A breakthrough paper on laser cooling of atoms below the Doppler limit which led to the award of the 1997 Nobel Prize for Physics to William D Phillips The official report on the development of the radio proximity fuse one of the most important new weapons of World War II The 1932 paper reporting the discovery of deuterium in experiments that led to Harold Urey's 1934 Nobel Prize for Chemistry A review of the development of the SEAC the first digital computer to employ stored programs and the first to process images in digital form The first paper demonstrating that parity is not conserved in nuclear physics a result that shattered a fundamental concept of theoretical physics and led to a Nobel Prize for T D Lee and C Y Yang Observation of Bose Einstein Condensation in a Dilute Atomic Vapor a 1995 paper that has already opened vast new areas of research A landmark contribution to the field of protein crystallography by Wlodawer and coworkers on the use of joint x ray and neutron diffraction to determine the structure of proteins **Advances in Complex Electromagnetic Materials** A. Priou, Ari Sihvola, S. Tretyakov, A. Vinogradov, 2012-12-06 Recent advances in our understanding of complex composite media especially chiral media for microwave applications suggest the feasibility of creating novel materials with

unusual properties and the possibility of constructing new microwave devices using such materials The emphasis of the book is on bi anisotropic materials whose most interesting feature is the magnetoelectric interaction of the fields The materials are expected to supply useful applications in radar technology aerospace microwave engineering manufacturing technology etc such as absorbers for low reflectivity shields reciprocal phase shifters polarization transformers The first experiments with artificial bi anisotropic media have been successfully carried out

Galileo Unbound David D. Nolte, 2018-07-12 Galileo Unbound traces the journey that brought us from Galileo's law of free fall to today's geneticists measuring evolutionary drift entangled quantum particles moving among many worlds and our lives as trajectories traversing a health space with thousands of dimensions Remarkably common themes persist that predict the evolution of species as readily as the orbits of planets or the collapse of stars into black holes This book tells the history of spaces of expanding dimension and increasing abstraction and how they continue today to give new insight into the physics of complex systems Galileo published the first modern law of motion the Law of Fall that was ideal and simple laying the foundation upon which Newton built the first theory of dynamics Early in the twentieth century geometry became the cause of motion rather than the result when Einstein envisioned the fabric of space time warped by mass and energy forcing light rays to bend past the Sun Possibly more radical was Feynman's dilemma of quantum particles taking all paths at once setting the stage for the modern fields of quantum field theory and quantum computing Yet as concepts of motion have evolved one thing has remained constant the need to track ever more complex changes and to capture their essence to find patterns in the chaos as we try to predict and control our world
