**Statistical Postprocessing of Ensemble Forecasts** Stéphane Vannitsem, Daniel S. Wilks, Jakob Messner, 2018-05-17 Statistical Postprocessing of Ensemble Forecasts brings together chapters contributed by international subject matter experts describing the current state of the art in the statistical postprocessing of ensemble forecasts The book illustrates the use of these methods in several important applications including weather hydrological and climate forecasts and renewable energy forecasting After an introductory section on ensemble forecasts and prediction systems the second section of the book is devoted to exposition of the methods available for statistical postprocessing of ensemble forecasts univariate and multivariate ensemble postprocessing are first reviewed by Wilks Chapters 3 then Schefzik and Müller Chapter 4 and the more specialized perspective necessary for postprocessing forecasts for extremes is presented by Friederichs Wahl and Buschow Chapter 5 The second section concludes with a discussion of forecast verification methods devised specifically for evaluation of ensemble forecasts Chapter 6 by

Thorarinsdottir and Schuhen The third section of this book is devoted to applications of ensemble postprocessing Practical aspects of ensemble postprocessing are first detailed in Chapter 7 Hamill including an extended and illustrative case study Chapters 8 Hemri 9 Pinson and Messner and 10 Van Schaeybroeck and Vannitsem discuss ensemble postprocessing specifically for hydrological applications postprocessing in support of renewable energy applications and postprocessing of long range forecasts from months to decades Finally Chapter 11 Messner provides a guide to the ensemble postprocessing software available in the R programming language which should greatly help readers implement many of the ideas presented in this book Edited by three experts with strong and complementary expertise in statistical postprocessing of ensemble forecasts this book assesses the new and rapidly developing field of ensemble forecast postprocessing as an extension of the use of statistical corrections to traditional deterministic forecasts Statistical Postprocessing of Ensemble Forecasts is an essential resource for researchers operational practitioners and students in weather seasonal and climate forecasting as well as users of such forecasts in fields involving renewable energy conventional energy hydrology environmental engineering and agriculture Consolidates for the first time the methodologies and applications of ensemble forecasts in one succinct place Provides real world examples of methods used to formulate forecasts Presents the tools needed to make the best use of multiple model forecasts in a timely and efficient manner

**COVID-19 Pandemic - Philosophical Approaches** Nicolae Sfetcu, The paper begins with a retrospective of the debates on the origin of life the virus or the cell The virus needs a cell for replication instead the cell is a more evolved form on the evolutionary scale of life In addition the study of viruses raises pressing conceptual and philosophical questions about their nature their classification and their place in the biological world The subject of pandemics is approached starting from the existentialism of Albert Camus and Sartre the replacement of the exclusion ritual with the disciplinary mechanism of Michel Foucault and about the Gaia hypothesis developed by James Lovelock and supported in the current pandemic by Bruno Latour The social dimensions of pandemics their connection to global warming which has led to an increase in infectious diseases and the deforestation of large areas which have caused viruses to migrate from their native area their reservoir are highlighted below The ethics of pandemics is approached from several philosophical points of view of which the most important in a crisis of such global dimensions is utilitarianism which involves maximizing benefits for society in direct conflict with the usual Kantian view of respect for people as individuals After a retrospective of the COVID 19 virus that caused the current pandemic its life cycle and its history with an emphasis on the philosophy of death the concept of biopower initially developed by Foucault is discussed with reference to the practice of modern states of control of the populations and the debate generated by Giorgio Agamben who states that what is manifested in this pandemic is the growing tendency to use the state of emergency as a normal paradigm of government An interesting and much debated approach is the one generated by the works of Slavoj i ek who states that the current pandemic has led to the bankruptcy of the current barbaric capitalism wondering if the path that humanity will take is a neo

communism Another important negative effect is desocialization with the conclusion of some philosophers that we cannot exist independently of our relationships with others that a person's humanity depends on the humanity of those around him The last section is dedicated to forecasting what the world will look like after the pandemic and there are already signs of a paradigm shift including the sudden disappearance of the wall ideology a cough was enough to make it suddenly impossible to avoid the responsibility that every individual has it towards all living beings for the simple fact that he is part of this world and of the desire to be part of it The whole is always involved in part because everything is in a sense in everything and in nature there are no autonomous regions that are an exception The COVID 19 pandemic seems to restore the supremacy that once belonged to politics One of the virtues of the virus is its ability to generate a more sober idea of freedom to be free means to do what needs to be done in a specific situation
