economy and our values The basic science is not complicated Stop burning fossil fuels tomorrow and the global temperature will stop rising tomorrow Stop burning fossil fuels in 50 years and the temperature will keep rising for 50 years making parts of our planet virtually uninhabitable It s up to us The hotter it gets the deeper and wider our fault lines will open The Heat Will Kill You First is about the extreme ways in which our planet is already changing It is about why spring is coming a few weeks earlier and fall is coming a few weeks later and the impact that will have on everything from our food supply to disease outbreaks It is about what will happen to our lives and our communities when typical summer days in Chicago or Boston go from 90 F to 110 F A heatwave Goodell explains is a predatory event one that culls out the most vulnerable people But that is changing As heatwaves become more intense and more common they will become more democratic As an award winning journalist who has been at the forefront of environmental journalism for decades Goodell s new book may be his most provocative yet explaining how extreme heat will dramatically change the world as we know it Masterfully reported mixing the latest scientific insight with on the ground storytelling Jeff Goodell tackles the big questions and uncovers how extreme heat is a force beyond anything we have reckoned with before
