Thinking Gabriel Weinberg, Lauren McCann, 2019-06-18 A WALL STREET JOURNAL BESTSELLER You can't really know anything if you just remember isolated facts. If the facts don't hang together on a latticework of theory, you don't have them in a usable form. You've got to have models in your head. Charlie Munger, investor vice chairman of Berkshire Hathaway. The world's greatest problem solvers, forecasters, and decision makers all rely on a set of frameworks and shortcuts that help them cut through complexity and separate good ideas from bad ones. They're called mental models, and you can find them in dense textbooks on psychology, physics, economics, and more. Or you can just read *Super Thinking*, a fun, illustrated guide to every mental model you could possibly need. How can mental models help you? Well, here are just a few examples. If you've ever been overwhelmed by a to-do list that's grown too long, maybe you need the Eisenhower Decision Matrix to help you prioritize. Use the 5 Whys model to better understand people's motivations or get to the root cause of a problem. Before concluding that your colleague who messes up your projects is out to sabotage you, consider Hanlon's Razor for an alternative explanation. Ever sat through a bad movie just because you paid a lot for the ticket? You might be falling prey to Sunk Cost Fallacy. Set up Forcing Functions like standing meetings or deadlines to help grease the wheels for changes you want to occur. So the next time you find yourself faced with a difficult decision or just trying to understand a complex situation, let *Super Thinking* upgrade your brain with mental models.

STEM, 2013 A vibrant capacity in Science, Technology, Engineering, and Mathematics. STEM is pivotal to increasing Australia's productivity. Building on recent research commissioned by Australia's Chief Scientist to identify STEM skills shortages, this project critically examines existing solutions to the STEM skills shortage in comparable countries and ascertains which, if any, of those solutions could be usefully applied to the formation and maintenance of a STEM skills workforce and proposes a set of options for increasing Australia's productivity and international competitiveness. The following aspects are addressed in this report: trends in STEM enrolments in all educational domains; access of STEM graduates to the labour market; the perceived relevance of STEM to economic growth and well-being; what other countries are doing to address declining STEM uptake and its impact on the workforce; and/or lifting national performance strategies, policies, and programs used to enhance STEM at all levels of education and judgments concerning the success of those programs; are measures put into effect in other countries and cultures successful, and how has this been evaluated; could and should such measures be applied in the Australian context, taking into account our cultural diversity; what are the implications of the application of culturally appropriate measures in Australia; and will the policy framework need to be modified to accommodate them. p 10-11 ed.
