Skills, Not Just Diplomas Lars Sondergaard,2012 Future growth in the countries in Eastern Europe and Central Asia ECA will increasingly depend on innovation And innovation requires skills This makes it important as countries plan for recovery to undertake reforms to reduce the skills shortages that the previous growth episode exposed Education systems have a very important role to play in creating the right skills But education systems in the region fall short of the demands of their economies in two major ways The first is that despite high levels of enrollment they do not produce enough graduates with the right skills Students graduate with diplomas not with skills because the quality of the education for many students is poor In large part this is because education systems remain focused on providing an excellent education to a few at the expense of improving the quality of learning for the majority Moreover the systems are still making the transition from teaching the basics to inculcating higher order skills such as critical thinking and problem solving The second way in which education systems fall short is that outside of a few countries in the EU there are few opportunities for adults to retrain or acquire new skills This book argues that generating more of the right skills requires a fundamental change of approach in the education systems in the region so that they aim for and deliver higher quality education for the vast majority of students not just diplomas but skills To start with education systems need to turn the lights on and take seriously the measurement of what students actually learn as opposed to measurement of the inputs into the education process on the implicit assumption that learning follows Policy makers also need to move away from the focus on inputs and processes and increase the emphasis on incentives

Preparing for Life in a Digital World Julian Fraillon,John Ainley,Wolfram Schulz,Tim Friedman,Daniel Duckworth,2020-02-14 This Open Access book summarizes the key findings from the second cycle of IEA s International Computer and Information Literacy Study ICILS conducted in 2018 ICILS seeks to establish how well schools

around the globe are responding to the need to provide young people with the necessary digital participatory competencies. Effective use of information and communication technologies (ICT) is an imperative for successful participation in an increasingly digital world. ICILS 2018 explores international differences in students' computer and information literacy (CIL), namely their ability to use computers to investigate, create, and communicate at home, at school, in the workplace, and in the community. Participating countries also had an option to administer an assessment of students' computational thinking (CT) focused on their ability to recognize aspects of real-world problems appropriate for computational formulation and to evaluate and develop algorithmic solutions to those problems so that the solutions could be operationalized with a computer. The data collected by ICILS 2018 show how digital competencies can be assessed using instruments representing authentic contexts for ICT use and how students' CIL and CT skills relate to school learning experiences, out-of-school contexts, and student characteristics. Those data also show how learning technologies are used in classrooms around the world. Background questionnaires asked students about their use of ICT and collected information from teachers, schools, and national education systems about the resourcing and teaching of CIL and CT within their countries. The results of ICILS 2018 will enable policymakers and education systems to develop a better understanding of the contexts and outcomes of CIL and CT education programs. *Windows 10 For Dummies* Andy Rathbone, 2015-08-10 Illustrates the new features of Windows 10

India and the Knowledge Economy Carl J. Dahlman, Anuja Utz, 2005-01-01 In the global knowledge economy of the twenty-first century, India's development policy challenges will require it to use knowledge more effectively to raise the productivity of agriculture, industry, and services and reduce poverty. India has made tremendous strides in its economic and social development in the past two decades. Its impressive growth in recent years (8.2 percent in 2003) can be attributed to the far-reaching reforms embarked on in 1991 and to opening the economy to global competition. In addition, India can count on a number of strengths as it strives to transform itself into a knowledge-based economy: availability of skilled human capital, a democratic system, widespread use of English, macroeconomic stability, a dynamic private sector, institutions of a free market economy, a local market that is one of the largest in the world, a well-developed financial sector, and a broad and diversified science and technology infrastructure and global niches in IT. But India can do more: much more to leverage its strengths and grasp today's opportunities. *India and the Knowledge Economy* assesses India's progress in becoming a knowledge economy and suggests actions to strengthen the economic and institutional regime: develop educated and skilled workers, create an efficient innovation system, and build a dynamic information infrastructure. It highlights that to get the greatest benefits from the knowledge revolution, India will need to press on with the economic reform agenda that it put into motion a decade ago and continue to implement the various policy and institutional changes needed to accelerate growth. In so doing, it will be able to improve its international competitiveness and join the ranks of countries that are making a successful transition to the knowledge economy. *Working Together* Pat Dudgeon, Helen Milroy, Roz Walker, 2014 This resource is written for health

Perspectives on the 'Bilingual Advantage': Challenges and Opportunities Peter Bright, Roberto Filippi, 2019-09-05 The claim that multilingual acquisition drives advantages in executive function is currently an issue of vigorous debate in academic literature Critics argue that evidence for this advantage has been confounded by unsound or questionable methodological practices with some investigators abandoning research in this area altogether indicating either that there is no bilingual advantage or that it is impossible to capture and therefore rule out alternative explanations for group differences Over the past decade and against this backdrop theory has developed from a relatively narrow focus on inhibitory control to incorporate theory of mind rule based learning reactive and proactive control visuo spatial memory and control of verbal interference in speech

comprehension Most recently authors have claimed that the process of becoming bilingual may also impact on metacognitive abilities The fundamental issue is whether the limited capacity and goal directed selectivity of our executive system can somehow be enhanced or otherwise profit from the continuous intense competition associated with communicating in multilingual environments However although this issue has received much attention in academic literature the question of which cognitive mechanisms are most influenced by the enhanced competition associated with multilingual contexts remains unresolved Therefore rather than dismissing this important topic we advocate a more systematic approach in which the effects of multilingual experience are assessed and interpreted across well defined stages of cognitive development We encourage a broad developmentally informed approach to plotting the trajectory of interactions between multi language learning and cognitive development using a convergence of neuroimaging and behavioral methods across the whole lifespan Moreover we suggest that the current theoretical framing of the bilingual advantage is simplistic and this issue may limit attempts to identify specific mechanisms most likely to be modulated by multilingual experience For example there is a tendency in academic literature to treat executive function as an essentially unitary fronto parietal system recruited in response to all manner of cognitive demand yet performance across so called executive function tasks is highly variable and intercorrelations are sometimes low It may be the case that some higher level mechanisms of executive function remain relatively unaffected while others are more sensitive to multilingual experience and that there may be disadvantages as well as advantages which themselves may be sensitive to factors such as age In our view there is an urgent need to take a more fine grained approach to this issue so that the strength and direction of changes in diverse cognitive abilities associated with multilanguage acquisition can be better understood This book compiles work from psychologists and neuroscientists who actively research whether how and the extent to which multilanguage acquisition promotes enhanced cognition or protects against age related cognitive or neurological deterioration We hope this collection encourages future efforts to drive theoretical progress well beyond the highly simplistic issue of whether the bilingual cognitive advantage is real or spurious
