Skills, Not Just Diplomas Lars Sondergaard, 2012

Future growth in the countries in Eastern Europe and Central Asia ECA will increasingly depend on innovation And innovation requires skills This makes it important as countries plan for recovery to undertake reforms to reduce the skills shortages that the previous growth episode exposed Education systems have a very important role to play in creating the right skills But education systems in the region fall short of the demands of their economies in two major ways The first is that despite high levels of enrollment they do not produce enough graduates with the right skills Students graduate with diplomas not with skills because the quality of the education for many students is poor In large part this is because education systems remain focused on providing an excellent education to a few at the expense of improving the quality of learning for the majority Moreover the systems are still making the transition from teaching the basics to inculcating higher order skills such as critical thinking and problem solving The second way in which education systems fall short is that outside of a few countries in the EU there are few opportunities for adults to retrain or acquire new skills This book argues that generating more of the right skills requires a fundamental change of approach in the education systems in the region so that they aim for and deliver higher quality education for the vast majority of students not just diplomas but skills To start with education systems need to turn the lights on and take seriously the measurement of what students actually learn as opposed to measurement of the inputs into the education process on the implicit assumption that learning follows Policy makers also need to move away from the focus on inputs and processes and increase the emphasis on incentives

Reliability and Validity of International Large-Scale Assessment Hans Wagemaker, 2020-09-03 This open access book describes and reviews the development of the quality control mechanisms and methodologies associated

with IEA's extensive program of educational research. A group of renowned international researchers directly involved in the design and execution of IEA's international large scale assessments (ILSAs) describe the operational and quality control procedures that are employed to address the challenges associated with providing high quality comparable data. Throughout the now considerable history of IEA's international large scale assessments, establishing the quality of the data has been paramount. Research in the complex multinational context in which IEA studies operate imposes significant burdens and challenges in terms of the methodologies and technologies that have been developed to achieve the stated study goals. The demands of the twin imperatives of validity and reliability must be satisfied in the context of multiple and diverse cultures, languages, orthographies, educational structures, educational histories and traditions. Readers will learn about IEA's approach to such challenges and the methods used to ensure that the quality of the data provided to policymakers and researchers can be trusted. An often neglected area of investigation, namely the consequential validity of ILSAs, is also explored, examining issues related to reporting, dissemination and impact, including discussion of the limits of interpretation. The final chapters address the question of the influence of ILSAs on policy and reform in education, including a case study from Singapore, a country known for its outstanding levels of achievement but which nevertheless seeks the means of continual improvement, illustrating best practice use of ILSA data.

Compendium for Early Career Researchers in Mathematics Education

Gabriele Kaiser, Norma Presmeg, 2019-04-26. The purpose of this Open Access compendium, written by experienced researchers in mathematics education, is to serve as a resource for early career researchers in furthering their knowledge of the state of the field and disseminating their research through publishing. To accomplish this, the book is split into four sections: Empirical Methods, Important Mathematics Education Themes, Academic Writing and Academic Publishing, and a section Looking Ahead. The chapters are based on workshops that were presented in the Early Career Researcher Day at the 13th International Congress on Mathematical Education (ICME 13). The combination of presentations on methodological approaches and theoretical perspectives, shaping the field in mathematics education research, as well as the strong emphasis on academic writing and publishing, offered strong insight into the theoretical and empirical bases of research in mathematics education for early career researchers in this field. Based on these presentations, the book provides a state of the art overview of important theories from mathematics education and the broad variety of empirical approaches currently widely used in mathematics education research. This compendium supports early career researchers in selecting adequate theoretical approaches and adopting the most appropriate methodological approaches for their own research. Furthermore, it helps early career researchers in mathematics education to avoid common pitfalls and problems while writing up their research, and it provides them with an overview of the most important journals for research in mathematics education, helping them to select the right venue for publishing and disseminating their work.
