Amos Richmond, 2008-04-15 Handbook of Microalgal Culture is truly a landmark publication drawing on some 50 years of worldwide experience in microalgal mass culture. This important book comprises comprehensive reviews of the current available information on microalgal culture written by 40 contributing authors from around the globe. The book is divided into four parts with Part I detailing biological and environmental aspects of microalgae with reference to microalgal biotechnology and Part II looking in depth at major theories and techniques of mass cultivation. Part III comprises chapters on the economic applications of microalgae including coverage of industrial production, the use of microalgae in human and animal nutrition and in aquaculture, nitrogen fixation, hydrogen and methane production and in bioremediation of polluted water. Finally, Part IV looks at new frontiers and includes chapters on genetic engineering, microalgae as platforms for recombinant proteins, bioactive chemicals, heterotrophic production, microalgae as gene delivery systems for expressing mosquito-cidal toxins and the enhancement of marine productivity for climate stabilization and food security. Handbook of Microalgal Culture is an essential purchase for all phycologists and also those researching aquatic systems, aquaculture and plant sciences. There is also much of great use to researchers and those involved in product formulation within pharmaceutical, nutrition and food companies. Libraries in all universities and research establishments teaching and researching in chemistry, biological and pharmaceutical sciences, food sciences and nutrition and aquaculture will need copies of this book on their shelves. Amos Richmond is at the Blaustein Institute for Desert Research, Ben Gurion University of the Negev, Israel. *Standards for Teachers* Linda Darling-Hammond, 1994 Teacher educators and teachers must be leaders in developing learner-centered standards for preparing teachers. Standards can help teachers build their own knowledge and understanding of what helps students learn. As schools undergo restructuring, teachers will be responsible for students not just subject matter information for understanding how learning is occurring and for having tools to assess how students learn and think as well as what they know. Teachers will also be responsible for curriculum development, assessment, decision making about special needs of students and reaching out to parents from different communities. Licensing requirements and teacher evaluation requirements generally do not focus on this conception of teaching. The National Board for Professional Teaching Standards is setting standards that reflect the real complexities and real judgments that teachers must deal with. Teachers' development of materials to be submitted for Board certification and teachers' reflection upon their teaching are powerful professional development activities. The goal should be to create, use, reflect upon, operationalize and enliven standards in a way that produces learning. This kind of work among teachers can lead to the development of a profession that can take ownership and leadership for creating and using an expanding base of knowledge to serve all children well.
